

What if you could send two-way push notifications to all wireless devices, including BlackBerry, Droid, iPad and iPhone?

Getting a message out to everyone who needs to know can be downright exhausting. Why not let the xMatters (*messaging*) engine shoulder the burden? The (*messaging*) engine tells your customers what they want to know – just load a list, type a message, and click send. It's that simple. Really.

The (*messaging*) engine helps you spread the word by:

Sending messages to any device.

The (*messaging*) engine isn't picky – it sends two-way push alerts to all wireless devices, even iPhone push messages.

Escorting your messages to their destinations.

The (*messaging*) engine offers find me, follow me device escalations, so your important notices reach the people who need them.

Lending your messages a voice.

The (*messaging*) engine enables voice alerting using recordings, text-to-speech, or a combination of the two.

Mastering your V.I.P. list.

The (*messaging*) engine makes managing contact lists easy, so the right people get the right messages. Upload lists from Excel spreadsheets or manage lists directly from the web.

“With a relevance engine we're able to keep people better informed, faster,” – Phil Carlyle, Charles Schwab
